Automotive Door Control System Design (Static Design)

Name: Mohamed Moustafa Aly Abd El-latif

Email: mohamed.bekheet2023@gmail.com

Static Design

ECU1 APIs

DIO	
Function Name	DIO_Init()
Parameters	DIO_PORT, DIO_CHANNEL, DIO_PINLEVEL
Return	No_Return
Description	Initialize the DIO module

DIO	
Function Name	DIO_Read()
Parameters	DIO_PORT, DIO_CHANNEL
Return	DIO_PINLEVEL
Description	Read pin value

DIO	
Function Name	DIO_Write()
Parameters	DIO_PORT, DIO_PINLEVEL
Return	No return
Description	Write pin level to a DIO pin

DIO_PORT	
Type	Enum
Range	Port A to Port F
Description	Port number in uC
DIO_CHANNEL	
Type	Enum
Range	PIN 0 to PIN 7
Description	Pin number in Port
DIO_PINLEVEL	
Type	Enum
Range	0 ,1
Description	Pin level is 0 or 1

TIMER	
Function Name	TIMER_Init()
Parameters	*TimConfig_PTR "TIMER_CONFIG_type"
Return	No_Return
Description	Initialize the TIMER module

TIMER	
Function Name	TIMER_Start()
Parameters	TIMER_CHANNEL_type, TIMER_VALUE_type
Return	No_Return
Description	Start Timer Channel

TIMER	
Function Name	TIMER_Stop()
Parameters	TIMER_CHANNEL_type
Return	No_Return
Description	Stop Timer Channel

TIMER_CONFIG_type	
Type	Struct
Range	Based on timer registers
Description	Include all the needed timer configurations to be set
TIMER_CHANNEL_type	
Type	Enum
Range	Based on the timer module in the ECU
Description	Timer channels
TIMER_VALUE_type	
Type	uint8_t
Range	Based on timer registers
Description	Timer ticks value to be set

CAN	
Function Name	CAN_Init()
Parameters	*CANConfig_PTR "CAN_CONFIG_type"
Return	No_Return
Description	Initializes the CAN Module

CAN	
Function Name	CAN_Send()
Parameters	uint32_t
Return	No_Return
Description	Send data over CAN Module

CAN	
Function Name	CAN_Read()
Parameters	No param
Return	uint32_t
Description	Read data from CAN Module

CAN_CONFIG_type	
Type	uint8_t
Range	Based on timer registers
Description	Timer ticks value to be set

DOOR READER	
Function Name	DOORREAD_Init()
Parameters	No param
Return	No_Return
Description	Initializes door reader module

DOOR READER	
Function Name	DOORREAD_ReadState ()
Parameters	No param
Return	1 >>open 0 >>closed
Description	read door state

LIGHT SWITCH	
Function Name	LIGHTREAD_Init()
Parameters	No param
Return	No_Return
Description	Initializes light switch reader module

LIGHT SWITCH	
Function Name	LIGHTREAD_ReadState ()
Parameters	No param
Return	1 >>on 0 >>off
Description	read light switch state

SPEED READER	
Function Name	SPEEDREAD_Init()
Parameters	No param
Return	No_Return
Description	Initializes speed sensor reader module

SPEED READER	
Function Name	SPEEDREAD_ReadValue ()
Parameters	No param
Return	Uint32_t
Description	read speed

DATA LOGGER	
Function Name	DATALOGGER_Start()
Parameters	T1,T2,T3,D1,D2,D3 “uint32_t”
Return	No return
Description	Start sending periodic data over CAN bus where T represent periodic Time in milli seconds and D represents data will be sent

ECU 2 APIs

DIO	
Function Name	DIO_Init()
Parameters	DIO_PORT, DIO_CHANNEL, DIO_PINLEVEL
Return	No_Return
Description	Initialize the DIO module

DIO	
Function Name	DIO_Read()
Parameters	DIO_PORT, DIO_CHANNEL
Return	DIO_PINLEVEL
Description	Read pin value

DIO	
Function Name	DIO_Write()
Parameters	DIO_PORT, DIO_PINLEVEL
Return	No return
Description	Write pin level to a DIO pin

DIO_PORT	
Type	Enum
Range	Port A to Port F
Description	Port number in uC
DIO_CHANNEL	
Type	Enum
Range	PIN 0 to PIN 7
Description	Pin number in Port
DIO_PINLEVEL	
Type	Enum
Range	0 ,1
Description	Pin level is 0 or 1

TIMER	
Function Name	TIMER_Init()
Parameters	*TimConfig_PTR "TIMER_CONFIG_type"
Return	No_Return
Description	Initialize the TIMER module

TIMER	
Function Name	TIMER_Start()
Parameters	TIMER_CHANNEL_type, TIMER_VALUE_type
Return	No_Return
Description	Start Timer Channel

TIMER	
Function Name	TIMER_Stop()
Parameters	TIMER_CHANNEL_type
Return	No_Return
Description	Stop Timer Channel

TIMER_CONFIG_type	
Type	Struct
Range	Based on timer registers
Description	Include all the needed timer configurations to be set
TIMER_CHANNEL_type	
Type	Enum
Range	Based on the timer module in the ECU
Description	Timer channels
TIMER_VALUE_type	
Type	uint8_t
Range	Based on timer registers
Description	Timer ticks value to be set

CAN	
Function Name	CAN_Init()
Parameters	*CANConfig_PTR "CAN_CONFIG_type"
Return	No_Return
Description	Initializes the CAN Module

CAN	
Function Name	CAN_Send()
Parameters	uint32_t
Return	No_Return
Description	Send data over CAN Module

CAN	
Function Name	CAN_Read()
Parameters	No param
Return	uint32_t
Description	Read data from CAN Module

CAN_CONFIG_type	
Type	uint8_t
Range	Based on timer registers
Description	Timer ticks value to be set

BUZZER CONTROL	
Function Name	BUZZERCONT_Init()
Parameters	No param
Return	No_Return
Description	Initializes Buzzer control module

BUZZER CONTROL	
Function Name	BUZZERCONT _drive ()
Parameters	1 >> on 0 >> off
Return	No return
Description	Drive buzzer on or off

LIGHT CONTROL	
Function Name	LIGHTCONT_Init()
Parameters	1 >> right light 0 >> left light
Return	No_Return
Description	Initializes light control module

LIGHT CONTROL	
Function Name	LIGHTCONT _drive ()
Parameters	1. 1 "on" or 0 "off" 2. 1 "right" or 0 "left"
Return	No return
Description	Drive left or right light on or off

DATA READER	
Function Name	DATAREAD_START()
Parameters	* Struct "ReceivedData_type"
Return	struct
Description	Read data sent from ECU1 and save it in ReceivedData_type struct

ReceivedData_type	
Type	Struct
Range	-
Description	Contains variables for expected data received from CAN bus
